

Washing line for the VW California SE, Ocean, Coast & Beach

Installation instructions

Introduction

These instructions describe how to attach the washing line poles and line to a VW California awning rail. In most cases it makes sense to attach this washing line system to the left-hand side of the Campervan so that items are not hanging in front of the sliding door. Attaching and removing the system takes only a couple of minutes and requires no tools.

WARNING – ALWAYS ENSURE THE WASHING LINE SYSTEM IS REMOVED BEFORE DRIVING THE CAMPERVAN!

Components

ID	PART	DESCRIPTION	QTY
A	Washing line poles, black		2
B	T Bolts		2
C	White Nylon Washers		2
D	2m lengths of washing line cord with guy rope tensioner		3

Process steps

1. Slide the T bolts into the awning rail from either end of the track. They can be positioned anywhere along the awning rail however it is usually best to position them between 1m and 2m apart from each other, and towards the rear of the van so that items do not drape in front of the doors.
2. Place one of the nylon washers onto each bolt as shown in Figure 1.

3. Screw one of the washing line poles onto each of the T bolts. No tools are required, simply grasp the pole and hand tighten it in the clockwise direction (right hand thread) as shown in Figure 2.
4. The washing line lengths have been prepared with a loop on each end, place the loops over the washing line pole and locate the cord into the notches in the pole as shown in Figure 3.
 - a. One of the loops was formed with a simple sliding knot (the loop without the guy rope tensioner) so that as the cord is pulled the knot will tighten around the pole.
 - b. The other end of each cord has a loop created by a guy rope tensioner; this can be used to individually adjust the tension in each of the three cords.

WARNING – TO AVOID DAMAGING THE AWNING RAIL A MAXIMUM OF 3KG SHOULD BE LOADED ONTO THE WASHING LINE, OR 1.5KG PER POLE!
